ABSTRACTED-PUB-NO: DE 4439896A

BASIC-ABSTRACT: New nucleic acid, suitable for internal characterisation of medical, biological or chemical samples, or of various types of prods., contains, by a combination of an ensemble of mols, the formation needed to represent numbers.

Also claimed are systems for the same purpose comprising: (a) nucleic acid constructs in which the mols. have multiple binding sites for 1 primer pair, the arrangement of which is such that amplification of an ensemble of mols. is possible, and this can then be used to determine a numerical code, or (b) an assortment of natural or synthetic particles which, through the combination of particle ensembles give the information for representing numbers.

USE - The prods. can be used e.g. to characterise a blood sample (to detect incorrect labelling or sample-to-sample contamination) or works of art; to indicate prodn. or expiry dates; to characterise crops or fish catches; to

identify the source of oil spills.

ADVANTAGE - The compsns. are universally applicable and easy to read.

ABSTRACT:

New nucleic acid, suitable for internal characterisation of medical, biological or chemical samples, or of various types of prods., contains, by a combination of an ensemble of mols, the formation needed to represent numbers. Also claimed are systems for the same purpose comprising: (a) nucleic acid constructs in which the mols. have multiple binding sites for \- 1 primer pair, the arrangement of which is such that amplification of an ensemble of mols. is possible, and this can then be used to determine a numerical code, or (b) an assortment of natural or synthetic particles which, through the combination of particle ensembles give the information for representing numbers.
